
Subject: Is HW included in KR and IR/MR included in PR?

Hi all,

I am struggling to understand the exact coverage of the different recodes.

In particular, I am wondering if I need to merge HW, KR, IR, MR, PR and HR into one dataset. Or if HW is entirely included in KR and if IR and MR are entirely included in the PR datasets? If the latter was true, then it would of course be sufficient for me to only merge together KR, PR and HR.

I am using waves 3 to 7. Not sure if for example IR/MR are entirely included in PR in one wave but are not for another wave.

I've searched the DHS page and forum for some time now and don't find an answer. Maybe anyone could help?

Many thanks!!

Best,
Timo
