Dear
I am using the Ethiopian 2016 DHS and I couldnt match the table 11.8 "among youngest children age $6-23$ months living with the mother". The total number in the table includes 2960 children while I am getting 3075 after applying the following command in stata.
use "C:\Users\UserPclDesktoplthesis\stata 2016ldiet diet.dta" , clear gen age $=\mathrm{v} 008-\mathrm{b} 3$

* select on the living children 6-23 month
keep if age<24 \& age $>5$ \& $b 5==1$
* regroup age
recode age(0/5=.)(6/8=1 "6-8")(9/11=2 "9-11")(12/17=3"12-17")(18/23=4 "18-23")(24/59=.), gen(child_age)
tab child_age
tab child_age[iw=v005/1000000]
* Keep only those living with their mother keep if $b 9==0$
* for checking if the child is the youngest drop if $\_n>0$ \& caseid $==$ caseid[ $\left.n-1\right]$
tab child_age
tab child_age[iw=v005/1000000]
Can you please explain to me how I can get the exact number and percentage as the table in the report.
Thank you
