Hi Tom,

I am using data for females and males between 0 and 25 years on an individual level. Hence, I am using PR as my base dataset.

From IR and KR I am only interested in v104-106 (and mv104-106) which describes childhood residence, years lived in current residence and type of place of previous residence.

For KR I am interested in data about children who have been born and how many of them died (v206-208) as well as birth weights, antenatal visits for pregnancy and literacy.

As far as I can tell, none of those data is available in the PR file, which is why I need to merge.

Best
Timo
