Hi,

I am currently looking at intimate partner violence in Democratic Republic of the Congo, Uganda, Ethiopia, Mozambique.

Now my questions

Q.1 Variable d111 speaks to the kind of IPV am looking at (physical, emotional and sexual violence). Do I use it or are the other variables that could sum up to the same, and if there are, what are the stata commands to arrive at that?

Q2. Which module do I use, Couples' Recode, Births Recode, Household Recode, Individual Recode?

Please assist with the above questions.

Thank a lot and looking forward to reading from you

Best
