Dear DHS Experts,

I am trying to replicate Table 10.7 Prevalence of diarrhoea in Ethiopia's 2011 report. However, I am having troubles merging PR dataset with KR. I have tried different ways but none of them works. I copied my codes as below.

```
use "/Ethiopia/2011/ETPR61DT/ETPR61FL.DTA", clear
keep hv001 hv002 hvidx hv201 hv205 hv225
rename hv001 v001
rename hv002 v002
rename hvidx b16
sort v001 v002 b16
save "/Ethiopia/2011/ETKR61DT/ETkKR61FLdiarrhoea.dta", replace
```

```
use "/Ethiopia/2011/ETKR61DT/ETKR61FL.DTA", clear
keep v001 v002 b16 v005 v008 b3 b5 h11 h11b v024 v025
sort v001 v002 b16
merge v001 v002 b16 using "/Ethiopia/2011/ETPR61DT/ETPR61FLdiarrhoea.dta"
```

Stata reports that the variables don't uniquely identify observations. If that's the case, which variables should I use instead? Thanks in advance!
