Subject: Re: Calculating cases for IYCF
Posted by Roselync on Sun, 27 May 2018 10:31:35 GMT

Hie Mluleki,
I managed to calculate the breastfeeding practices (early initiation of breastfeeding, exclusive breastfeeding) using the syntax that you gave me. However, am faced with the challenge of calculating bottle feeding. I tried applying the syntax for bottle feeding using the two separate data files but it still doesn't match that of the report. Any suggestions on how I can go about it?. Below is the syntax that I used:

svy: tab bottle2 if age<6, count percent format(%4.0f) col...then I tried the other one:

svy: tab child_age_grp bottle2, count format(%4.0f)
svy: tab child_age_grp bottle2, percent format(%4.1f) row

Your assistance will be highly appreciated

Regards,
Rose
