Subject: Re: Creating a variable for disease Posted by Bridgette-DHS on Wed, 30 May 2018 11:54:12 GMT View Forum Message <> Reply to Message

Following is a response from Senior DHS Stata Specialist, Tom Pullum:

Yes, you definitely can construct such a variable. It would be 1 if any of the three relevant variables is "yes" and 0 otherwise, except that it would be NA (dot) if all of the three variables are NA. But it would seem much more appropriate to me to think of illness as a consequence, rather than as a determinant, of malnutrition.
