Dear DHS Team,

I require some assistance with interpreting the data from the Ghana DHS 2014 male data. Variable mv312 is labelled as "most recent contraceptive method". Unfortunately I am unable to determine whether this is most recent contraceptive method at last intercourse or method used within the last 5 years.

I would be very grateful if I could receive some clarification as to the coding and definition of the variable to assist me with further analysis and reporting of results of the data.

Best.
