Hello Mayank,

Please see the code below - maybe it may help you.
You did not specify which dataset you're working with, I presume it's India DHS 2015-16... The code will work for most DHS surveys (if not all).

FYI:
I am not getting the total number of children as in the report, but the rates are the same...

I'm getting 219 796, but the report has 219 760 --- with difference 36 (I don't know where this is coming from)

```
