Subject: Duplicates in KR file and Empty values for HV005 after merging. Posted by Mayank\_Ag on Fri, 01 Jun 2018 10:09:29 GMT

I am using DHS 15-16 for India and doing the analysis in SPSS.

- 1. While merging PR and KR files i found duplicate values in the KR file with same value for all indicators for the child. Can somebody please explain why is this happening and how to deal with them?
- 2. Further the merged file is having 3 missing values for HV005 (Household weight). This is after applying the following filters.
- a) Child is alive (B5)
- b) listed in the household(B16)
- c) Removed the duplicates from KR file.

Is there any other filter i need to apply so that these empty values don't come in the final dataset? I have already gone through the previous posts on this forum but couldn't figure out a solution to this problem. Are these 3 cases coming because of the 6 duplicates?

Thanks in advance!!
