We estimate stunting based on the data in the PR file, but restricted to the de facto children.  the following code produces the estimate you want:

recode hc70 (min/-201 = 1 "Stunted") (-200/9990 = 0 "Not stunted") (else=.), gen(stunting)
tab stunting [iw=hv005/1000000] if hc70 < 9990 & hv103==1
