Thanks a lot for the reply. That really helped. But i have 2 more queries.

1. I found 3 duplicates in KR file with same values for all the variables except for the identity variables (V001, V002, V003). Can you please explain this?

2. I have been trying to match the estimates presented in the table 10.0 of the final report. As mentioned earlier i have not been able to do so for Mother's nutritional status. I was given some code by another specialist on the forums. The code did generate the percentages with good accuracy but the total no. of obs. didn't match as presented in the final reports (Image attached) and the conditions mentioned in the report were not taken into account (Images attached). Can you please mention how to correctly generate the figures ?

Estimates

Underweight - 45.9; 51103

Normal- 38.2; 128260

Overweight 27.1; 32318

TIA.
