Subject: school attendance variables Posted by cippi on Sat, 23 Jun 2018 13:07:06 GMT View Forum Message <> Reply to Message

Hello, I would like to measure out-of school attendance for secondary level in Malawi, Bangladesh and Guatemala. I have a couple of questions please:

1) what's the best variable to use to measure out-of-school attendance?

2) I can see that age ranges for secondary school vary for the 3 countries. I am assuming this depends on the fact that children go from primary to secondary school at different ages in the 3 countries? are the age ranges you use defined by the country offices? thank you for your help!
