Subject: Sex of preceding child Posted by rahul on Sun, 15 Jul 2018 13:31:10 GMT View Forum Message <> Reply to Message

Dear All

I wish to construct a variable 'sex of preceding child' using kid file in NFHS4 2015-16 data. I am using variables b4 and midx and wish to have a new variable showing how many index boys have previous girls siblings and vice versa ('Sex of preceding child' variable is mentioned in NFHS4 India report).

Thanks in advance!
