Hello,

I am working on individual data of Ethiopia 2016 DHS. I want to replicate table 9.8 about place of delivery and table 9.9 about assistance during delivery using stata. But the result that I found is different from the final report even the total number live birth in last 5 years is different. 7589 from my calculation but 11023 on the final report.

The stata command I used mentioned as following:

```
recode m15_1 (10 11 12 =1 "Home") (20/26 30/36 40/46 = 2 " Health facility") (96=3 "others"),  
gen(Place_Delviry)  
replace Place_Delviry =. if v208 ==0  
lab var Place_Delviry " Place of delivery for last birth"  
tab Place_Delviry [iw=v005/1000000]
```

I am very happy if somebody help me.
