Dear MLULEKI TSAWE,

Thank you so much for your guidelines. It seems like a complete syntax. I really did not expect that much!. I do appreciate it.

Everything seems working properly except The following code:

```
*=====
=====*
```

**** DROP IF NOT WITHIN SAMPLE**

```
qui regr m2a m2b m2c m2d m2e /*if v208 >0 & v208 !=.*/ [pw=weight]
drop if e(sample)!=1
```

In my case, it shows error (Photo attached) and perhaps, it is affecting the downstream analysis.

Would you mind to suggest me how to solve this (It seems complicated to me as I am a beginner in Stata).

I am looking forward to hearing your suggestion.

Thanking you,
Mahmudul
