Hello,

I'm using two dhs datasets, Mali 2012-13 (mlir6hfl.dta) and Uganda 2011(ugir60fl.dta). I'm interested to husband/partner's occupation (v704 and v705). I have two questions about these variables.

1) When I made a frequency distribution of v704 for both countries, I found no label for its categories. How can I find them for both countries?

2) When I tabulated v705, I found just one category (did not work). Does this mean that all the women enumerated in this two countries dhs had unemployed husbands/partners ? Or, is there another variable that captures husband/partner's occupation grouped for these countries?

Here are Mali tabulation for example,

. tab v704

husband/par |
tner's |
occupation	Freq. Percent Cum.
1	4,458 49.85 49.85
2	271 3.03 52.88
3	3 0.03 52.91
4	1,213 13.56 66.48
5	156 1.74 68.22
6	162 1.81 70.03
7	86 0.96 70.99
8	112 1.25 72.25
9	156 1.74 73.99
10	202 2.26 76.25
11	284 3.18 79.43
88	1,744 19.50 98.93
96	96 1.07 100.00
Total	8,943 100.00

. tab v705

husband/partner's occupation |
(grouped)	Freq. Percent Cum.
did not work	10,424 100.00 100.00

Total	10,424	100.00

Thanks you
