Hello,
I am working on the 2012 Tajikistan DHS data to correlate of stunting. Risk factors are sex of child, age of child, mother's age and educational level, source water, type of toilet, household size etc. I have tried to use the data from personal data. However, I could not find data mother's age and timing of breastfeeding. Could you please let me what file should use for correlation?
Thank you,
Malohat
