---

Hello:

When the 2015 Nigeria Malaria Indicator Survey data (Household member recode file or children's file ) and the 2015 Nigeria GPS datasets are merged using their cluster numbers (HV001 in survey data and DHSCLUST in GPS data) using spss. I will be getting this error message as i want to do further analysis ERROR: Missing value(s) found in XC or YC variable(s). Missing values not allowed for coordinate

variables. I think this is because they have different cluster numbers. Please i need help maybe i might not be merging them properly .

Thank you.
