In the dataset for Haiti 2017, I believe hv108 (education completed in single years) should be ≥ 13 and ≤ 21 for when hv106==3 (higher level of education attained).

See tab hv108 hv106, and compare to tab hv108 hv107 (highest education completed). Currently, hv108 ≥ 12 & hv108 ≤ 20 .

What do you think? Thank you!
