Dear RHS,

I have to (1) first spatially join GIS data in QGIS, i.e. join the shapefile from Egypt's GPS DHS folder AND the EGYPT GADM shapefile. Am I right?

The next step is to (2) import the output file of step (1) to STATA to merge it with the Egypt DHS Woman's recode file. Is that correct?

Thank you very much. And apologies for disturbing you.

Amira
