Hi!

I've a similar question. I wish to merge PR file with IR file for NFHS 2(India). I had a look at IPUMS. It is indeed very helpful. However when I try to select variables from two different types of files (IR and PR), the webpage says my selection (data cart) will not be retained.

Any way around this?

I primarily need all of IR variables and education variables of PR (ie education information of each and every member of the household)

Best,
Priyoma
