Dear User, a response from senior sampler, Dr. Ruilin Ren:

Quote:

Male surveys are usually conducted in a sub-sample of households. the appendix A should provide this information.

I think the best place to start is to look at the sampling section of each final report. There is an Appendix, generally Appendix A which deals with the sample design. Every survey is unique so it is worth looking at this section. After reviewing, if you have additional questions, please feel free to post again. Thank you!
