I would like to know how to reproduce the percentage of cases of diarrhea with blood of VI Encuesta Nacional de Salud Materno-Infantil 2014-15 using SPSS. Even selecting the options: weight case - v005 and select cases - B5=1, was not able to obtain the results published in the final report.

I also would like to obtain the porportion of households with handwashing facility with water or soap (HR database; I choose: weight sample -Hv005; select cases - if hv230A = 1 or hv230A = 2).

Thanks in advance for your help

Best regards
