Thanks for your response.

I would like to understand DHS data better for this project (looking at food security in Bangladesh over time) and for future projects. For my current needs, you are right, I can just collapse each year by region and then append the collapsed data sets. But I want to make sure that I understand the sample design for each round (hence the questions on svyset, strata, etc.

Question - what 2004 coding are you talking about? I didn't know that DHS posted code anywhere, except in some responses on this forum.

Anna
