Subject: Unmet Need and Demand Satisfied in 2011 Uganda DHS

Dear all,

I am working on a report looking at demand satisfied among youth across different DHS surveys
and am having a difficult time matching the unmet need (new definition with v626a) and demand
satisfied numbers that I am getting in Stata with the estimates in StatCompiler for the 2011
Uganda DHS.

Here are the estimates that I get in Stata:
Unmet need (all women) 15-19: 7.8%
Unmet need (all women) 20-24: 25.3%
Unmet need (all women) 15-24: 15.5%
Demand satisfied by modern methods (all women) 15-19: 41.5%
Demand satisfied by modern methods (all women) 20-24: 41.8%
Demand satisfied by modern methods (all women) 15-24: 41.7%

Here are the estimates that StatCompiler lists:
Unmet need (all women) 15-19: 10.5%
Unmet need (all women) 20-24: 27.5%
Unmet need (all women) 15-24: 18.1%
Demand satisfied by modern methods (all women) 15-19: 34.9%
Demand satisfied by modern methods (all women) 20-24: 39.9%
Demand satisfied by modern methods (all women) 15-24: 38.4%

Is anyone aware of why I might be seeing these discrepancies? Is StatCompiler using a different
sample, even in the indicator marked all women? Do I need to used a different weighting scheme
other than the sample weights provided? I tried to match using the earlier definition of unmet need
at as well, but that did not work. Any help or information would be greatly appreciated!

Here is my code in case it helps:
gen indiv_weight = v005/1000000

gen modern_contraception=0
replace modern_contraception=1 if v313==3
replace modern_contraception=. if v313==.

gen any_contraception=0
replace any_contraception=1 if v313==3 | v313==1 | v313==2
replace any_contraception=. if v313==.

gen unmet_need=0
replace unmet_need=1 if v626a==1 | v626a==2
replace unmet_need=. if v626a==. | v626a==.a | v626a==.b

gen demand_satisfied=.

replace demand_satisfied=0 if unmet_need==1
replace demand_satisfied=0 if v313==0 | v313==1 | v313==2
replace demand_satisfied=1 if v313==3
replace demand_satisfied=. if unmet_need==0 & any_contraception==0 | unmet_need==. | modern_contraception==.

proportion unmet_need if v013==1 | v013==2 [pweight = indiv_weight]
proportion unmet_need if v013==1 [pweight = indiv_weight]
proportion unmet_need if v013==2 [pweight = indiv_weight]
proportion demand_satisfied if v013==1 | v013==2 [pweight = indiv_weight]
proportion demand_satisfied if v013==1 [pweight = indiv_weight]
proportion demand_satisfied if v013==2 [pweight = indiv_weight]

Thank you so much!

Best regards,
Charlotte
