Dear all,

I am trying to find the data on the number of tetanus injection before birth in the BR file of BDHS 2014. The designated variable for this is m1. I downloaded both SPSS and STATA files but seems like there are no data in either of them. However, I found data for m1 variable in BDHS 2007 and 2011.

Could you please provide me any suggestion about retrieving the data?

Thank you very much!
