Dear,

I am trying to reproduce the % of any tobacco product use among men in Haiti (Table 18.6 in the report).

We are using the code below, but could not match it the published estimate (14.5%, sample size 3,831). We found a 20.7 estimate with a weighted sample size of 5,853.

```
gen tabaccon=.  
replace tabaccon=0 if inrange(mv012,35,64)  
egen _tabaccon=anymatch(mv463a mv463b mv463c mv463d mv463x), v(1 2) // any tobacco  
type  
recode tabaccon 0=1 if _tabaccon==1
```

Could you help with this issue?

Thank you,
Fernanda
