Subject: Uganda DHS 2001 sampling information

Hi all,
I'm conducting a secondary analysis of the UDHS 2000/2001-2016 data for my thesis. I'd like to calculate the probabilities of selection of enumeration areas and households for my complex samples design. I'm looking for region-specific sampling data for the 2000-2001 UDHS showing the total enumeration areas by region, and the number sampled in each region. I'm also looking for the breakdown of the total number of households by region (the breakdown of households sampled is available in the report). The sample write-up states that the 1991 Uganda population and housing census frame was used to select enumeration areas (and households), but I've not been successful in finding this document. This information has been provided in subsequent DHS reports in Appendix A. Your help will be of great help!

Thanks

Francis
