Hi Sandra,

Your sample size for 2016 (children with exact birth date) looks fine. However, it looks like there is a problem with your 2011 survey data, since the sample size (children with exact birth date) should be similar to 2016. Are you sure that you are using the right survey data? (You know that there are different version of the survey such as all children, children under five or only male households, etc...) I attach a table showing our final sample derivation for the paper. I hope it helps.

Best,

Koray
