I am working on Egypt DHS 2014 (child file) using SAS. I need a guide on how to generate mother's age at last birth born in the past 2 years. Is the following code right? But I need it to be only for the last birth

```
** Last child in the last 2 years;
child_age=(V008-B3);        * CHILD'S AGE IN MONTHS;
IF child_age < 24 then do;  * ONLY CHILDREN AGED LESS THAN TWO YEARS OLD;
end;

** Mother age at birth;
agemoth = int( (B3-V011)/12 );
if 15 le agemoth lt 18 then mothagec=0;        *<18;
else if 18 le agemoth lt 25 then mothagec=1;   * 18-24;
else if 25 le agemoth lt 35 then mothagec=2;   *25-34;
else if 35 le agemoth le 49 then mothagec=3;   *>34;
else mothagec =.;
```

Also I need to generate birth interval of last birth born in the past 2 years using B11.

I really appreciate your help
