I did not see women of adolescent age, 10-14 years covered in the MDD-W, where country has need for the information/ data related to adolescent age to move ahead with the adolescent nutrition programme and further measure the progress. Global momentum is also targeting women of adolescent age as well under new emerging programming. My report is on this context if it is possible to include adolescent module as well. I did not find appropriate theme area to discuss about it but has taken opportunity to discuss about it under MDD-W.
