Subject: Including the 10-14 years girls for anemia and diet indicators Posted by Mauro Brero on Thu, 14 Mar 2019 09:32:14 GMT View Forum Message <> Reply to Message

New evidence show the importance of targeting school-age children and adolescents in health and nutrition programmes. However, very few data is available for the age group 10-14 years. It would be important to include this age group in key indicators, especially on anemia prevalence but also on questionnaire about diets.
