Subject: Re: Death registration Posted by Jacob.Lepard on Sat, 16 Mar 2019 01:49:11 GMT View Forum Message <> Reply to Message

I support this module as a means to better track and understand causes of death - I stress here the importance of understanding whether the patient has undergone a surgical procedure or was diagnosed with a surgical condition 30 days prior to their death. This data would be highly useful in the tracking of surgical mortality worldwide. As a neurosurgeon this has high relevance to neurosurgical workforce expansion.
