It looks like it doesn't like the parameter id=, but wants ids=. Try

```
DHSdesign <- svydesign(ids = stata.file$v021, strata=stata.file$v022, weights =  
stata.file$v005/1000000, data=stata.file)
```

I just tested on my system, though, and it accepts id=, so I'm not sure that is your problem.

Also look at how the variable names are spelled. Usually they are all lower case, but you have V005 with a capital letter in your post, but this should probably be v005 (as I used it above). I think this is maybe your source of error.
