Dear All,

I want to run a logistic regression on stillbirth using the MALawi Data. However, my regression model fails if I do the survey set. I kindly look forward for your kind help

```
svyset v021 [pweight=wt], strata(v023) vce(linearized) singleunit(missing)
```

```
    pweight: wt
```

```
      VCE: linearized
```

```
Single unit: missing
```

```
Strata 1: v023
```

```
  SU 1: v021
```

```
FPC 1: <zero>
```

```
. svy: logistic stillbirths i.v190
```

```
(running logistic on estimation sample)
```

```
an error occurred when svy executed logistic  
r(2000);
```

Thanks for your kind help in advance

Kind regard

Mamadou
