Dear All,

I want to run a logistic regression on stillbirth using the MALawi Data. However, my regression model fails if I do the survey set. I kindly look forward for your kind help

```
svyset v021 [pweight=wt], strata(v023) vce(linearized) singleunit(missing)
```

```
    pweight: wt
      VCE: linearized
Single unit: missing
  Strata 1: v023
    SU 1: v021
    FPC 1: <zero>
```

```
. svy: logistic stillbirths i.v190
(running logistic on estimation sample)
an error occurred when svy executed logistic
r(2000);
```

Thanks for your kind help in advance

Kind regard
Mamadou
