It is not clear what your confusion is with these variables, please provide more information. m57e-m57l are public sector facilities for antenatal care, while m57m-m57r are private sector facilities. For partner's education, v701 is partner's highest level of education attended, and v702 is the highest grade completed at that level (just like v106 and v107). For breastfeeding, see m4 (v3a08g is a reason given for not using contraception). v025 and v102 are identical - you can use either. s325 is the last source of family planning. usually v312 is the variable that you want to look at concerning family planning.
