Hello,

In case you're trying to derive the Washington Group disability statistics on SAS using the 2016 Uganda DHS, the code below will guide you in the right direction.

***** IMPORT SPSS DATA TO SAS *****

```
PROC IMPORT DATAFILE="\\HO123456789\Users\User1\Documents\UGANDA DHS
2016\UGANDA_2016 _SPSS_DATA\UGPR7AFL"
DBMS=SAV
OUT=WORK.UGANDA_DHS
REPLACE;
RUN;
```

** DISABILITY _ UGANDA DHS 2016 ON SAS **/

```
DATA DISABILITY_UGANDA;
SET WORK.UGANDA_DHS;
```

```
weight = (HV005 / 1000000);
psu   = HV021;
strata = HV023;
```

***** ONLY PERSONS AGED FIVE YEARS AND OLDER *****

```
IF HV105 > 4;
```

***** FORMAT *****

```
FORMAT Agegroup $11. Ungandadisab $21.;
```

***** DERIVING DISABILITY *****

```
IF SH24 =. OR SH25 =. THEN SEEING = 9;
IF SH24 =1 OR SH25 =1 THEN SEEING = 1;
IF SH24 =2 OR SH25 =2 THEN SEEING = 2;
IF SH24 =3 OR SH25 =3 THEN SEEING = 3;
IF SH24 =4 OR SH25 =4 THEN SEEING = 4;
IF SH24 =8 OR SH25 =8 THEN SEEING = 8;
```

```
IF SH27 =. OR SH28 =. THEN HEARING = 9;
