On behalf of the PMI Case Management team: (cross-posted with the post on Q536) These questions ask 'how long after the fever started to did you take DRUG'...however, it might be easier and more germane to add the timeliness factor to the series Q533/534/536 so that the questionnaire asks how soon after the fever started was TREATMENT sought...we are more interested in them going to seek appropriate treatment in a timely fashion.
