Quote:Do I just substitute these for the integrated version in the STATA code below?
That's correct.

As you note, you don't need to construct unique strata variables; they are already in IPUMS DHS (idhsstrata).

Your weighting command is correct. If you get an error message about single strata, add "singleunit(center)" to the end of it:

```
svyset [pw=perweight], psu(idhspsu) strata(idhsstrata) singleunit(center)
```
