I tried to use the following command to merge the KR file with Wi file in Stata. This is an example for Niger DHS 1992.

```
 ********************************************************** ************************************
clear all
set more off
use ".....\Niger 1998\NIWI31FL.DTA"
rename whhid hhid
merge 1:m hhid using ".....\Niger 1998\NIHR31FL.DTA" // merging with household record
drop _merge
keep hhid wlthindf wlthind5 hv001 hv002 hv003
rename hv001 v001
rename hv002 v002
rename hv003 v003
sort v001 v002 v003
save ".....\Niger 1998\NIHR31FLnew.DTA", replace

****
clear all
set more off
use ".....\Niger 1998\NIKR31FL.DTA", clear
sort v001 v002 v003
merge m:1 v001 v002 using ".....\Niger 1998\NIHR31FLnew.DTA" // merging with Wealth Index file
drop if _merge==2
drop _merge

rename wlthind5 v190 // wlthind5: wealth index
ta v190
 ***********************************************************
********************************************************** *********
```

I found the following error message:
"variables v001 v002 do not uniquely identify observations in the using data"

Thank you.

Regards,
Rahman
