hello,

I am working on NFHS4 dataset and i am having trouble in matching the values with report. I have emerged PR, IR and MR files since some values are not in MR file. But when i am matching the values for variables like Religion, caste, marital status and schooling with the report provided, they are coming to be different. I have merged the files using hv024, hv001, hv002 and hvidx variables from PR file, v024, v001, v002 and v003 from IR file and same variables from MR file. Any help will be highly appreciated.
