Subject: PSU and Strata identifiers - DV module Nepal
Posted by Rashu on Sun, 04 Aug 2019 00:50:10 GMT

I am doing research using the data from DHS 2016. I am only using a sample of women who participated in the domestic violence module.

I am trying to use the svyset option to weight my data. I found that v021 is labeled PSU and v022 is labeled as sample strata. So that I used the following command, but I am not sure if I used the correct one or not?

gen wgt=d005/1000000
svyset [pw=wgt], psu(v021) strata(v022)

```
      pweight: wgt
          VCE: linearized
  Single unit: missing
     Strata 1: v022
        SU 1: v021
       FPC 1: <zero>
```

Thank You.
