Hi,

I wanted to conduct state and district wise analysis (correlation and tabulation) of child's nutritional status with their birth weight/size, mothers schooling and mothers BMI. (Hence merge PR with IR, KR files)

I also wanted to check consumption of food groups across household wealth index (Hence KR merged with HR) and cross tabulate child and mothers food group consumption (merge KR and IR)

Please help me with doing this on stata for NFHS 4 file.
