Just to say the following gives me number of events (weighted) - 318.67 not national ASFR:

You can check that the weighted mean of the rates (exposure used as weights) is equal to the rate at the country level :  $2852,75 \times 0,0624375 + 1629,376 \times 0,086262 = 0,0710984$

Thank you
