Subject: Re: Using tfr2 to Calculate age specific marital fertility rate Posted by Mercysh on Thu, 03 Oct 2019 11:39:59 GMT View Forum Message <> Reply to Message

Just to say the following gives me number of events (weighted) - 318.67 not national ASFR:

You can check that the weighted mean of the rates (exposure used as weights) is equal to the rate at the country level : 2852,75\*0,0624375+1629,376\*0,086262=0,0710984

Thank you
