Thank you Bridgette and Tom.

I intend to use the data as repeated cross-sections in order to make comparisons. But given the differences in district level data being non-comparable between 1992-93/2005-06 vs 1998-99/2015-16, I hope to use the state level variations instead.

I'm assuming all trend analysis should also be restricted to the NFHS 2,3 and 4 rounds given intra-state administrative changes.

Do let me know if this seems like a reasonable step. Thanks again.
