Hi

May you please assist  
I am doing analysis on South Africa DHS 2016 whereby I want to derive a variable using the PR file and then merge this variable to the children's recode (KR file) but upon merging, 626 children records are lost/missing [i.e. 626 records are not matched].  
Meaning, these kids are not in the PR file but present in the KR and yet I need the 626 to complete my sample size of 3,548. Am i missing something?

Here is the code:

```
use "C:\Users\ZaneleMt\Desktop\SADHS 2016 DATA\DATASETS\ZAKR71DT\ZAKR71FL.dta",
clear
gen line=b16
sort v001 v002 line

*keep caseid midx v001 v002 v003 v005 bidx line v008 b3 b9 v001 v002 v003 bidx v409* v410*
v411* v413* v412* v414* m4 m38 m34 m15 m3* m55* v208 b4

//count = 3,548 or 3,571.9917
gen filetype = 1

save "C:\Users\ZaneleMt\Desktop\SADHS 2016 DATA\DATASETS\ZAKR71DT\KRtemp.dta",
replace
