Subject: prevalence of anemia and associated factors in children
Posted by zelalem on Thu, 21 Nov 2019 08:59:11 GMT

I'm analysing DHS data on prevalence of anemia and associated factors at regional level based on DHS data.so is there a need to extract all variables from the DHS data set? or can I recode there at the data set and analysing it using either do file or command window?
tnx all dear!
